

BUSINESS CONTINUITY MANAGEMENT

Today, organizations rely heavily on services, business processes and technologies to develop their businesses and earn revenue. Therefore, it is crucial that these processes are not interrupted or altered, and business continuity is guaranteed.

Platinum Ciber-Security assists its clients in the development of their business continuity management schemes, through the development of its different components.

What do we offer?

SERVICES

In order to guarantee business continuity, it is necessary to analyze the infrastructure and critical processes, evaluate possible threats and risks. Detailed, actionable contingency, continuity and disaster recovery plans must then be developed.

- | | |
|------------------------------------|--|
| 1 Risk Management (ERM) | 4 Design and organization of the Recovery Team |
| 2 Impact Assessement (BIA) | 5 Specific procedures for each step |
| 3 Recovery Plan Design (BCP / DRP) | 6 Design and implementation of Test Plans |

BUSINESS CONTINUITY TOOL

At Platinum Cyber-Security we use **Eindelos**, a tool specially designed for business continuity management that includes all the necessary modules for continuity management. Eindelos has pre-built/pre-configured continuity management functionalities from the first moment, instead of having to build them with each customer implementation, which requires too much effort, time and money on the part of the customer and as of the supplier.

The functionality of Eindelos is built through modules, which provide different benefits according to the needs of each organization. The solution includes international methodologies such as DRI and BCI, as well as BS 25999, ISO 223.
